

PREVENT BED BUG INFESTATIONS AT THE SOURCE

Most bed bug infestations start when bugs hitch a ride into your facilities on the clothing and personal belongings of clients, guests, or employees.

The MS 2020 Bed Bug Oven™ solves this problem by providing a safe, effective, and chemical-free means of killing bed bugs BEFORE the infestation begins.

How Does it Work ?

Simply place clothing and other personal items into the 78" (H) x 36" (W) x 24" (D) MS 2020 Bed Bug Oven™ and “bake” for 90 minutes during the intake process.

The MS 2020 Bed Bug Oven™ safely raises temperatures to 118°F long enough to completely kill any bed bugs or eggs hiding in the items.
